

Mixed Up Dots

Ready, set, compare!

Today in Logicland, Lex will show you all about making comparisons between two numbers. Let's dive right in!

What are Relational Operators?

Below is a list of **relational operators**, which are symbols we use to compare two numbers (You might recognize these from math!).

Here's how we use relational operators:

4 > 1 means 4 is **less than** 1

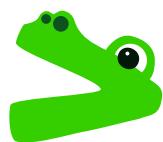

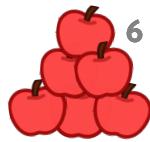

9 ≠ 5 means 9 is **not equal to** 5

2 ≤ 3 means 2 is **less than or equal to** 3

| Symbol | English |
|--------|-----------------------|
| = | Equal to |
| ≠ | Not equal to |
| > | Greater than |
| < | Less than |
| ≥ | Greater or equal to |
| ≤ | Less than or equal to |

Hungrily Chompin' Away

Lex brought his friend Allie the Hungry Alligator to demonstrate how you can remember the different **relational operator** symbols.

6 > 2 means 6 is greater than 2

3 < 7 means 3 is less than 7

Imagine Allie as a less than (<) or greater than (>) symbol. Because Allie is hungry, Allie always wants to eat the **larger** pile of fruit, so her mouth will **open towards the larger pile**. Notice how Allie's mouth always faces the larger number. This is the same way relational operators work!

Logichips Factory

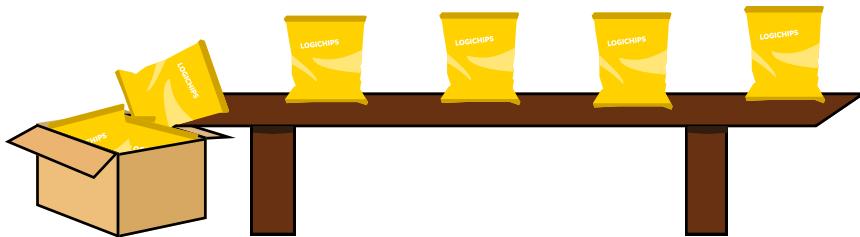

You might be wondering: Why are relational operators **important**, and how can they be used? Let's take a look at an example from Logichips, a potato chip factory at Logicland!

LOGICHIPS FACTORY

Logichips promises that each bag of potato chips has **at least 15 chips** inside.

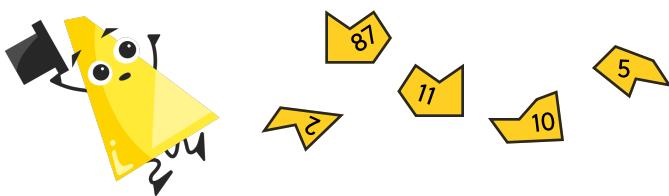

To keep their promise, they have a machine that only packages bags of chips when there are **at least 15 chips** inside. Using relational operators, this can be written as:

Number of chips ≥ 15

Logichips is thankful for relational operators, because it helps them decide whether to package a bag of chips. Accordingly, relational operators help us **make specific decisions** by **comparing two values** with each other.

Dot-To-Dot Fun!

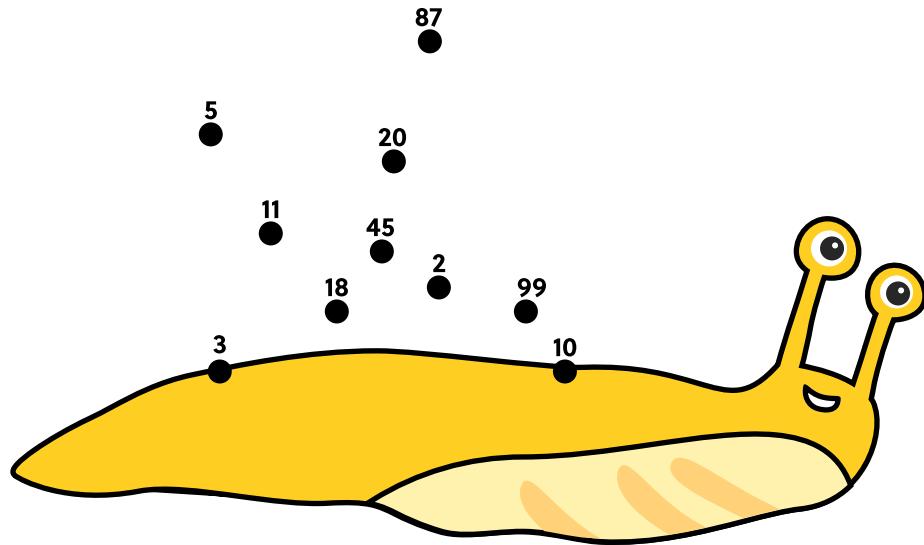

Uh-oh, Lex accidentally dropped his numbered puzzle on the floor! Now, the numbers are all mixed up and out of order. On the next page, use your knowledge of relational operators to **complete the picture** with hints from Lex's friends!

LOGICLAND

Mission 2

If $82 = 45$, connect 2 to 99

If $12 \leq 13$, connect 2 to 18

If $93 \leq 95$, connect 87 to 10

If $6 > 9$, connect 45 to 2

If $322 \leq 300$, connect 10 to 18

If $23 \geq 25$, connect 45 to 5

If $92 \geq 65$, connect 3 to 5

If $18 > 82$, connect 87 to 20

If $28 = 28$, connect 5 to 87

If $38 < 10$, connect 20 to 99

If $281 > 102$, connect 99 to 3

If $87 > 86$, connect 11 to 20

If $100 > 1000$, connect 5 to 11

If $90 \geq 90$, connect 18 to 11
